1/34 Simulation of Electromagnetic Fields: The Finite-Difference Time-Domain (FDTD) Method and Its Applications Veysel Demir, Ph.D. demir@ceet.niu.edu

Simulation of Electromagnetic Fields: The Finite

Wireless power transfer (WPT), wireless power transmission, wireless energy transmission (WET), or electromagnetic power transfer is the transmission of electrical energy without wires as a physical link. In a wireless power transmission system, a transmitter device, driven by electric power from a power source, generates a time-varying electromagnetic field, which transmits power across space ...

Wireless power transfer - Wikipedia

The paper reviews the application of deterministic-stochastic models in some areas of computational electromagnetics. Namely, in certain problems there is an uncertainty in the input data set as some properties of a system are partly or entirely unknown. Thus, a simple stochastic collocation (SC) method is used to determine relevant statistics about given responses.

Stochastic Collocation Applications in Computational

Electrodynamics is the physics of electromagnetic radiation, and electromagnetism is the physical phenomenon associated with the theory of electrodynamics. Electric and magnetic fields obey the properties of superposition. Thus, a field due to any particular particle or time-varying electric or magnetic field contributes to the fields present in the same space due to other causes.

Proceedings of the IEEE is the leading journal to provide in-depth review, survey, and tutorial coverage of the technical developments in electronics, electrical and computer engineering, and computer science.

IEEE Xplore: Proceedings of the IEEE

Research Summary. My current research is at the intersection of communication theory, signal processing, and information theory. A primary research thrust is the advancement of MIMO (multiple-input multiple-output) communication technology including space-time coding, efficient receiver algorithms, channel quantization, synchronization, scheduling algorithms, cross-layer design for MIMO ad hoc ...

Resume - Prof. Robert W. Heath Jr.

2.1. Capacitive tactile sensors. A capacitive sensor consists of two conductive plates with a dielectric material sandwiched between them. For parallel plate capacitors, capacitance can be expressed as, $C = \frac{A\epsilon_0\epsilon_r}{d}$. Where C is the capacitance, A is the overlapping area of the two plates, ϵ_0 is the permittivity of free space, ϵ_r is the relative permittivity of the dielectric material ...
