

metallocene based polyolefins preparation pdf

The last 20 years have brought a series of breakthroughs in polyolefins catalysis technology. From Ziegler-Natta catalysis technology, to metallocene technology in the 1990s, to post-metallocene technology today, each new development has increased the producer's freedom in more precisely controlling polymer structure and properties.

Olefin polymer technologies - History and recent progress at

Polypropylene (PP), also known as polypropene, is a thermoplastic polymer used in a wide variety of applications. It is produced via chain-growth polymerization from the monomer propylene. Polypropylene belongs to the group of polyolefins and is partially crystalline and non-polar. Its properties are similar to polyethylene, but it is slightly harder and more heat resistant.
