inherently lowers costs as it provides a better product and/or service. Statistical Process Control provides accountability and is an essential ingredient in this quality effort. Statistical Process Control is not an abstract theoretical exercise for mathematicians. It is a hands-on endeavor by people who care about their work and strive to improve

Introduction to STATISTICAL PROCESS CONTROL TECHNIQUES

A Note About Statistical Control $\hat{\epsilon}$ A process being in statistical control does not necessarily indicate that the process is "good enough" for manufacturing. A further condition is that the UCL and LCL on the Average Chart must be inside specification limits. For the final product, specification limits are generally dictated by the customer.

Chapter 8 Statistical Process Control 8.1 Control charts The most common method of statistical process control is to take samples at regular intervals and to plot the sample mean on a control chart. If the sample mean lies within the warning limits (as point (1)) the process is assumed to be on target. If it lies outside the action

Statistical Process Control for Total Quality tions. The sample standard deviation (S) is the square root of the sum of the squares of all the individual reading , $l1$:linus the square of the average of those readings, X, divided by the sample size minus one, and is a measure of the dispersion of those individual readings.

4 Control Charts 13.1.2 Statistical stability A process is statistically stable over time (with respect to characteristic X) if the distribution of X does not change over time { see Fig. 13.1.4(a). You may wish to think of this in terms of stem-and-leaf plots constructed from data collected over separate time intervals (e.g. from different days) being very

If process control activities assure that no special cause sources of variation are active, the process is said to be in statistical control or "in control." Such processes are said to be stable, predictable, and consistent since it is possible to predict the performance of the process.
